PROFILE

Hey, I'm Laurens, a full-stack developer with a background in Computer Science and a passion for building with blockchain and AI.

I co-founded Effect.AI, a blockchain-powered micro-tasking platform providing work for thousands of people around the globe. Today I am Head of Development at Nosana, a decentralized GPU compute grid on Solana powering AI inference workloads.

EXPERIENCE & EDUCATION

Head of Development — Nosana

2021 – now

Joined Nosana at its inception and leading the development of its decentralized GPU computing platform, combining technical strategy, architecture and team leadership.

Co-founder — Effect.AI

2017 – now

Co-founded Effect.AI and building a global decentralized platform connecting people, businesses and AI through blockchain technology.

Co-founder — Tappy

2022 – 2024

Co-founded Tappy, a Web3 platform for simple, secure and shareable crypto payment links. Led product and technical development from concept to launch, making crypto payments approachable for people who never want to see an address.

Lead Developer — Itsavirus

2016 – 2018

Led the development of digital platforms for major clients around the world, combining hands-on engineering with technical direction and team leadership.

MSc Computer Science — University of Amsterdam

2014 – 2016

Graduated on automated multivariate web design optimization using AI genetic algorithms.

Web Developer — Itsavirus

2012 – 2016

Built websites and web applications for clients across the Randstad and beyond, from first pixel to production.

BSc Computer Science

2011 – 2014

Thesis on detecting malicious websites through geographical consistency of website components.

SELECTED PROJECTS

Nosana

2021 – now

Decentralized GPU compute grid on Solana. Started out as decentralized CI/CD, now powering AI inference workloads worldwide, fueled by the NOS token.

Effect.AI

2017 — now

The first blockchain-based framework for the future of work: a global, on-demand, 24×7 scalable workforce for micro-tasking and AI data labeling, powered by the EFX token.

Tappy

2022 — 2024

The easiest way to request a payment in crypto: create a payment link, share it anywhere, and get paid in USDC — non-custodial, no KYC, no fees.

Self-Coding Website

2021

A website that styles itself: the style block is displayed and editable while a small auto-typing script makes the site literally write its own code.

SKILLS

Frontend

Vue · Nuxt · React · TypeScript · Tailwind · SCSS · Bulma

Backend

Node.js · PHP · Python · REST & GraphQL APIs

Blockchain

Solana · Ethereum · Rust · EOS · Smart Contracts · Token Economics

Databases

PostgreSQL · MySQL · MongoDB · Redis

Infra

Docker · Kubernetes · CI/CD · Linux

Other

AI / Genetic Algorithms · Git
