PROFILE

Hey, I am Laurens — a full-stack developer with a background in Computer Science and a love for blockchain.

I co-founded Effect.AI, a blockchain-powered micro-tasking platform providing work for thousands of people around the globe. Today I am Head of Development at Nosana, a decentralized GPU compute grid on Solana powering AI inference workloads.

EXPERIENCE & EDUCATION

Head of Development — Nosana

2021 — now

Leading development of a decentralized GPU compute grid on Solana: from decentralized CI/CD pipelines to a marketplace for AI inference.

Co-founder — Effect.AI

2017 — 2021

Blockchain-based framework for the future of work. Built a micro-tasking platform for AI data labeling, powered by the EFX token.

MSc Computer Science — University of Amsterdam

2015 — 2017

Graduated on automated multivariate web design optimization using genetic algorithms.

BSc Computer Science

2011 — 2015

Thesis on detecting malicious websites through geographical consistency of website components.

SELECTED PROJECTS

Nosana

2021 — now

Decentralized GPU compute grid on Solana. Started out as decentralized CI/CD, now powering AI inference workloads worldwide, fueled by the NOS token.

Effect Network

2017 — 2021

The first blockchain-based framework for the future of work: a global, on-demand, 24×7 scalable workforce for micro-tasking and AI data labeling, powered by the EFX token.

Self-Coding Website

2021

A website that styles itself: the style block is displayed and editable while a small auto-typing script makes the site literally write its own code.

SKILLS

Frontend

Vue · Nuxt · TypeScript · SCSS · Bulma

Backend

Node.js · PHP · Python · REST & GraphQL APIs

Blockchain

Solana · Rust · EOS · Smart Contracts · Token Economics

Other

AI / Genetic Algorithms · CI/CD · Docker · Linux
